SUPPLEMENTARY CATALOG

Indiana Nut Nursery

J. F. Wilkinson, Proprietor

ROCKPORT - - - INDIANA

Greenriver

Seven years old budded Greenriver pecan tree in nursery row in Indiana Nut Nursery, bearing its fifth crop of 14 pounds of nuts in fall of 1922, when photo was taken. This tree produced a crop in fall of 1923, 1924 and 1925. It is growing on a high hill in clay soil and has never been sprayed or pruned. No expense whatever has been put on this tree since the first summer's growth of bud.

Why not make profitable your waste places, beautify your lawns, or plant an orchard with these profitable trees?

To Customers and Friends:

Due to the unusual demand for nut trees this season my supply for this spring is limited and am issuing only this supplementary catalog.

I will issue a regular catalog this fall which I will be glad to send on request.

That my trees have given satisfaction is evidenced by the many testimonials from my customers.

My young budded trees growing here have proven their quality by their early and prolific bearing.

My nursery is located in the heart of the northern pecan tree territory in a soil especially adapted to growing nut trees where they grow an unusually good root-system making them easy to transplant and quick to start growth.

Nut trees are the longest lived of all food producing trees, and once established require less care and attention than fruit trees, as they do not need to be sprayed and after the head of the tree is once formed little or no pruning is necessary.

Budded or grafted trees bear early, an orchard of them in a few years should come into prolific bearing, and will last for a century or more. Plant only budded or grafted trees.

My trees are budded or grafted from bearing trees insuring them to be true to label.

The demand for nuts is annually increasing and the price advancing, which makes nut culture a profitable industry.

Before placing your order for nut trees, be sure you are buying from a reliable nurseryman who will sell you only budded or grafted trees of Hardy Northern varieties.

Almost every one owning land has more or less vacant space that could be made profitable by planting to nut trees.

Thanking past customers and soliciting your future orders, as well as orders from new correspondents, with assurance that orders in the future will receive prompt and personal attention as in the past.

J. F. WILKINSON

Demand for Nuts

The United States annually imports millions of dollars worth of nuts, many of which might be grown at home.

Nut brokers and dealers are clamoring for all home grown nuts of all kinds to meet the increasing demands of their customers. Each fall I get many inquiries from them as to the nut crop in this section stating they are in the market for any amount up to car load lots.

Why hesitate to plant nut trees? The Agricultural Department, The American Nut Journal, farm journals, magazines, and nut tree authorities recommend their planting.

Planting a nut orchard is not a speculation, but an investment; one that will in a few years pay increasing annual dividends, not only to the planter but to future generations as well.

There are thousands of acres of land in each state, not producing enough to pay the taxes, that would return handsome profits if planted to nut trees.

As nut trees live so long and attain such great size they should be planted very wide apart, so they may be grown on land that is to be annually cultivated to grain crops, and interfere very little with cultivation.

Delayed planting means delayed returns. A tree planted this year is always a year ahead of a tree planted a year later, and the difference is not the amount of the first, but always the amount of the last crop borne. As the crop annually increases with the growth of the tree, in a few years the difference is several dollars.

Nut tree planting should not be confined to orchard planting but may be grown almost anywhere a tree is wanted, along fence rows or in vacant places. Pecan trees are ideal for shade trees as they are not bothered by insects and do not shed their leaves until after severe frosts.

Budded or Grafted Trees Bear Early

Three year old transplanted Major pecan tree bearing 10 pecans.

Many have the belief that a pecan tree must be fifteen or twenty years old before it will bear. This belief is based on seedling trees which is true with them, but not so with a budded or grafted tree.

The question, how long will it take a budded pecan tree to bear, is asked so often, that I would say that from observation and experience, with good care, they will come into bearing as early as apple trees.

I have never had a budded or grafted tree to pass 8 years old without fruiting, most of them much younger. I have a few budded trees in nursery row now 10 years old that have produced 8 consecutive crops of pecans.

Hardiness

The varieties propagated by me and listed herein are from parent trees whose native home is in the Hardy Northern Nut Tree Territory.

I do not handle any Southern varieties or propagate from any tree whose native home is any distance south of here. Therefore my trees can be safely planted anywhere in the Northern Nut Tree Territory.

My trees have stood a temperature of 26 degrees below zero without injury, and fruited the following summer.

Nut trees are later than fruit trees to start growth in the spring, and are seldom subject to injury by late spring frosts.

Location and Soil

My nursery is located in the Ohio Valley near Rockport, Indiana, near the E. & O. V. traction line, 25 miles east of Evansville, Indiana, which is considered the center of the Northern pecan tree territory.

In this locality are thousands of native seedling nut trees of all sizes.

This being the natural home of the Hardy Northern pecan tree, my nursery stock is grown under natural conditions, giving them all the strength and vigor possible for a tree to have.

The soil in which my nursery is located is especially adapted for this, as it is underlaid with a strata of hard soil which discourages the downward growth of the tap root at a depth of about four feet, causing many lateral or feeder roots to develop near the surface that would not in a sandy or loose sub-soil. This gives my trees a superior system of lateral roots, making them easy to transplant and quick to start growth.

Varieties of Pecans

MAJOR—Originated in Henderson County, Ky. Parent tree very large, prolific and an annual bearer; nut medium to small, almost round, thin shell, plump kernel of fine quality, splendid cracker. An ideal nut for the confectioner.

GREENRIVER—Originated in Henderson County, Kentucky. Parent tree very large and prolific, and is a very regular bearer. Nut of good size, plump kernel, of fine flavor, good cracker. A very desirable nut for home use as well as a favorite for the market.

BUTTERICK—Parent tree stands near Grayville, Illinois. This tree is very old and a prolific bearer. It is known to have been in bearing for more than one hun-

dred years, in which time it is said to have missed only three crops. The nut is large, thin shell, plump kernel of good quality, a desirable variety in every way.

BUSSERON—Originated in Knox County, Indiana. Parent tree very old and said to be one of the best bearing trees in this section; nut large, of good quality, medium shell, splendid kernel.

McALLISTER—Parent tree stands in Posey County, Indiana; is very large and old. In former years it is said to have borne abundant crops of well filled nuts, but of late years, on account of old age, has filled irregularly. This tree is a hybrid, having quite a lot of hickory blood, with the pecan characteristics predominating.

KENTUCKY—Parent tree stands near Rockport, Indiana. Tree very old and large. Nut of beautiful yellow color with black markings, thin shell, plump kernel of good quality. Parent tree prolific and regular bearer.

INDIANA—Parent tree stands near the Busseron. Tree medium size, annual and very prolific bearer. The nut is very much the same as the Busseron in size and shape. Thin shell and good quality.

POSEY—Originated in Gibson County, Indiana. Parent tree medium size, said to be regular bearer but not so prolific as some other varieties. Nuts very large, thin shell, and an excellent cracker.

NIBLACK—Originated near Vincennes, Indiana. Parent tree an annual and prolific bearer. Nut medium size, thin shell, splendid cracker, quality of kernel good.

WARRICK—Originated in Warrick County, Indiana. Tree medium size, hardy grower, good bearer, nut large and of good flavor. A desirable variety.

Black Walnuts

The black walnut is found growing in most parts of the United States as a natural forest tree, and has always been considered so common that its true value as a food producing tree has been overlooked.

On account of the high value of walnut lumber for special purposes, much of the walnut timber has been cut in the past few years, which has greatly reduced the supply of nuts.

As the food value of walnuts is becoming better realized and the supply of nuts decreased, the price has greatly advanced.

With power cracking machines now being manufactured, which greatly reduce the cost of cracking walnuts, the growing of these superior varieties is sure to be a profitable industry.

By careful search, several varieties have been found which are superior to the average nut and which are easily cracked and in most cases the kernels, with little effort, can be taken out in whole halves.

STABLER—Nut medium size, quality of kernel good, an excellent cracker. Parent tree in Maryland.

MILLER—Nut large, kernel good quality, medium shell, good cracker. Parent tree in Indiana.

THOMAS—Nut large, medium shell, good cracker, quality of kernel good. Parent tree in Pennsylvania.

OHIO—Nut medium size, thin shell, good cracker, kernel of good quality. Parent tree in Ohio.

Prices of Pecan and Walnut Trees

(Budded or Grafted)

	Each
2 to 3 feet	\$1.50
3 to 4 feet	\$1.75
4 to 5 feet	\$2.00
5 to 6 feet	\$2.25
6 to 8 feet	\$2.50

Small seedling nut trees already growing may be top-worked to these varieties. For this work I am prepared to furnish graft-wood or bud-wood in season. Also each season I do a limited amount of this work for others and will be glad to give you an estimate on request.

Bud-wood or graft-wood may be sent by parcel post.

Guarantee

All trees are guaranteed to be fresh stock, carefully dug and packed and delivered to transportation company in good condition; also to be true to label, and should any prove not to be, will on proper proof replace them but will not be liable for further damages.

Terms

For immediate shipment cash with order; on orders booked 50% with order, balance due when stock is ordered shipped.

Shipping

Express shipments advised, and unless otherwise ordered all tree shipments will be made by express. Should size or variety ordered be exhausted, order will be filled with its nearest likeness in stock unless no substituting is stated in order.

Reference

I am a member of the Northern Nut Growers' Association, and bank reference or list of satisfied customers will be sent on request.
